

ABSTRACT

A base station continuously transmits control information to at least one communication terminal in an area to perform a communication control of the communication terminal. The base station includes a control information generating part that generates control information, a communications part that continuously transmits the control information generated by the control information generating part to the communication terminal in the area, and a control information control part that makes the communication terminal in the area unable to recognize the control information sent by the base station when a predetermined condition is met.
